About me

I am an IT engineer with experience in backend development and solutions for the banking sector, having participated in projects for BBVA. I specialize in Java, service integration (APIs), and process management in production environments using agile methodologies.

I have collaborated on the development of critical systems, including anti-fraud solutions and platforms for SME banking, ensuring the proper operation, deployment, and maintenance of services. I focus on code quality, system stability, and continuous process improvement.

I am looking to join a team where I can add value with my technical experience, strengthen my skills, and contribute to the development of robust solutions that positively impact the business.

Skills

Teamwork

Work experience

• Featured projects

- One Click PyME
 - Two products are launched for SME banking for more than 1000 clients, offering them: 1) An increase on their credit card line and 2) The possibility of deferring payments on their current debt in a fixed payment plan where the client chooses the term in months and the amount they wish to defer from their debt.
- Stop Loss Legend Change
 - Existing offers in SME banking are being modified to display new regulatory statements and thus inform interested customers whether or not it is possible to obtain the benefit of the offer they are viewing.

• Fullstack Developer | LikeNuuk S.A de C.V | 2019 - 2022

Project: Development of a web app for the management of a hotel chain.

- I participated in and led the project to create a web app for managing rooms, supplies, and services for a hotel chain in much of the State of Mexico and Mexico City. This involved consuming APIs at the backend level using the MVC design pattern. I was also in charge of developing the front end using HTML and CSS, and I also participated in developing databases using MySQL and stored procedures.

• Backend Developer | BBVA | 2022 - 2023

Project: One Click SME

- I joined and actively participated in the development of 2 offers for SME banking. Within this initiative, I participated as a backend developer for the Java (legacy) part, bringing both offers to production. These offers impacted more than 1 million SME clients currently served by BBVA, offering an increase in their credit lines or deferring their current debts in fixed payment plans.

• Backend Developer | BBVA | 2023 - 2024

Project: Implementation of an anti-fraud monitoring service | BBVA

- I implemented an API or ASO Service for SME banking to bring a new anti-fraud monitoring system, recording queries to balances and transactions, in order to have more accurate control over all SME customer transactions.

• Frontend Developer | BBVA | 2025 - 2026

Project: Stop Loss Change of Legends

- I collaborated on a series of modifications to the legal aspects of a large number of offers provided to over a million SME clients on a daily basis, in order to resolve a regulatory issue provided by BANXICO and to comply with current business regulations.

• Backend Developer | BBVA | March 2026

Project: Implementation of the anti-fraud monitoring model

- I participated in the development and implementation of an anti-fraud monitoring API for SME banking, in order to detect and mitigate possible fraudulent operations and thus eradicate or reduce the rate of fraud committed.
